

# ProtectZyme™

Formulated to enhance digestion of problematic proteins and minimize effects from starch consumption\*

**ProtectZyme™** is a digestive support formula designed to minimize the adverse effects of occasional consumption of gluten, dairy, soy, and egg proteins in individuals who experience sensitivity to these foods.\* It also helps curb the detrimental effects of occasionally eating excessive amounts of starchy foods and sugar (sucrose).\* It is meant for individuals with mild gluten sensitivities or intolerances, who are uncomfortable after indulging in gluten-containing foods. (Note: This product is not intended for those with celiac disease or allergies to gluten or wheat.)

Even under the best circumstances, traveling, dining out, and cross contact of foods mean that even when individuals with mild food sensitivities are vigilant about avoiding offending foods, they may still be exposed to problem-causing compounds. ProtectZyme™ is useful when a meal's ingredients aren't known or when an occasional "cheat" or "treat" is planned.

## Highlights\*

**Glutalytic®** is a unique blend of enzymes designed to break down gluten proteins quickly and efficiently, almost completely degrading gluten in the stomach and upper GI tract. In doing so, it potentially stabilizes the effects associated with gluten exposure in sensitive individuals. These people do not endure the debilitating symptoms of a gluten-intolerant condition, but may experience uncomfortable effects after eating gluten. Hence, Glutalytic® may help make occasional dietary derailments less problematic. The enzymes in Glutalytic® also help break down hard-to-digest proteins from dairy, soy, and egg.\*

**Synetrim® CQ** is a concentrated extract of the stems and leaves of *Cissus quadrangularis*, a perennial plant of the grape family, also known as veldt grape or devil's backbone. It is the only *Cissus quadrangularis* (CQ) extract patented for weight management and to support healthy metabolic functions. It inhibits starch breakdown into glucose and the conversion of sucrose into glucose and fructose. This may reduce the glycemic and insulin impact of starchy and sugar-containing foods. However, it does not interfere with the absorption of glucose or fructose from foods such as fruits and fruit juices. Because it helps reduce the absorption of starch-derived glucose after a carbohydrate-rich meal, Synetrim® CQ helps maintain healthy blood glucose already in the normal range.\*

Synetrim® CQ also supports the production of feel-good hormones and brain chemicals, which may help promote feelings of emotional well-being, potentially stabilizing the tendency toward mood-induced overeating with "comfort foods" typically being high in carbohydrates.\*

## Recommended Use

- Take two capsules per day before a meal, or as directed by your health care practitioner.
- Consider taking before a meal that contains gluten, soy, eggs, dairy, starches and/or sugar (in the form of sucrose).

Glutalytic® is a registered trademark of Deerland Enzymes.

Synetrim® CQ is a registered trademark of Icon Group, LLC and is protected under US Patent 7,175,859 and patents pending.

Consult with your healthcare practitioner about your specific circumstances and any questions you may have.
