Basic Minerals™ A Comprehensive Mineral/Trace Element Formula

DESCRIPTION

Basic Minerals[™], from Douglas Laboratories, is a comprehensive mineral/trace element formula. Basic Minerals contains patented mineral amino acid chelates from Albion Laboratories and other welltolerated and highly absorbable mineral forms. Basic Minerals is iron-free, making it an appropriate choice for those concerned about getting too much iron but who want to supplement with a full-spectrum of other minerals and trace elements.

FUNCTIONS

Minerals play a variety of essential roles throughout the body.

Some of the primary roles of each mineral

include:

- · Calcium is a principal mineral constituent of bones and is thus essential for strong bones.
- Magnesium is involved in energy metabolism, and is notably important in the heart, skeletal muscles, and nervous system.
- lodine is necessary for the synthesis of thyroxin, the thyroid hormone that regulates the body's metabolic rate.
- Zinc is important for growth, immune system function, protein synthesis, antioxidant mechanisms, and wound healing.
- Selenium is an essential cofactor of glutathione peroxidase, a potent antioxidant.
- Copper regulates iron metabolism and activates superoxide dismutase, a powerful endogenous antioxidant.
- Manganese is essential for antioxidant systems in the body, bone growth, fat metabolism, and protein, nucleic acid, and cartilage synthesis.
- Chromium is required for normal blood sugar and lipid metabolism; it is an integral component of glucose tolerance factor (GTF).
- Molybdenum is involved in copper and iron transport, nucleic acid synthesis, and sulfur metabolism.
- Potassium is involved in normal muscle tone, nerve function, and many enzymes.
- · Vanadium is active in lipid and glucose metabolism.
- Boron is involved in steroid hormone metabolism, cell membrane stability, and bone health.

INDICATIONS

Basic Minerals may be used by individuals who want to supplement with a complete array of minerals and trace elements. Individuals who already take a Douglas Laboratories multiple vitamin-mineral-trace element supplement do not generally need additional minerals.

FORMULA (#BMN)

Calcium (as calcium citrate) 400 m	ig
lodine (from kelp) 150 m	icg
Magnesium (as magnesium aspartate and	
magnesium amino acid chelate**) 400 m	ig
Zinc (as zinc amino acid chelate**) 20 mg	1
Selenium (as selenium	
amino acid complex) 200 m	icg
Copper (as copper amino	
acid chelate**)	
Manganese (as manganese amino	
acid chelate**) 20 mg	1
Chromium (as chromium	
polynicotinate***) 200 m	icg

Basic Minerals™ A Comprehensive Mineral/Trace Element Formula

Molybdenum (as molybdenum amino

acid chelate**)	150 mcg
Potassium (as potassium chloride)	
Vanadium (as vanadyl sulfate)	39 mcg
Boron (as boron aspartate-citrate)	2 mg

U.S. Patent No. 4,599,152 Albion Laboratories. *ChromeMate® brand of chromium polynicotinate (niacin-bound chromium) U.S. Patent No. 4,923,855 InterHealth Co.

SUGGESTED USE

Three capsules twice daily with food, or as directed by a physician. Douglas Product Data Laboratories®

SIDE EFFECTS

No adverse side effects have been reported.

STORAGE

Store in a cool, dry place, away from direct light. Keep out of reach of children.
